# Digital Cameras for Microscopy

Camera Overview For Materials Science Microscopes

More Detail, Faster Inspections

**EVIDENT**

# Passionate about Imaging

Versatility, performance, and precise color reproduction are characteristics all our microscope cameras share. We're committed to providing innovative cameras that capture the clear, reliable images critical to every microscopist. Our comprehensive range of digital cameras for materials science are optimized for various applications, so you can choose the one that works best for you.

## Advanced Digital Camera for Challenging Applications: DP75 Digital Microscope Camera

Make your microscope inspections more efficient with the powerful DP75 digital microscope camera. This high-performance tool is tailored for a range of applications and enables you capture high-resolution brightfield, darkfield, MIX (brightfield+ darkfield), polarization, DIC, fluorescence, and near-infrared (NIR) observation images.\*

### Exceptional Imaging for Challenging Inspection Applications

#### Better Clarity and Precision

Experience sharp, low-noise inspection images. The camera's leading-edge TruAI denoise algorithm enhances the image quality while our improved multiple-axis color correction technology delivers outstanding color fidelity for vivid reproductions and the RGB color reproducibility needed for printed materials and LCD color filters.

An image of printed paper

#### Fast Frame Rate at High Resolution

With a fast frame rate of 22 fps at over 4k resolution and 60 fps at full HD resolution, you can check live images while moving at a fast pace, speeding up your inspection and analysis workflow.

An image of a wafer

#### High-Resolution Images at Low Magnification

The camera's pixel shifting makes it possible to capture high-resolution images even at low magnification with a maximum resolution of 8192 × 6000.

#### Flexible Upgrades

Since the DP75 camera uses USB 3.1 Gen2, it is compatible with most PCs and can easily be bought as an upgrade for your current system.

\*A microscope system for NIR observation is required.

## Find Flaws Fast

A sample's appearance can vary depending on the quality of the material, surface conditions, or illumination methods. To show samples accurately, the camera's live high dynamic range (HDR) combines several images taken at different exposures to correct for brightness differences on the sample's surface. Live HDR provides high-fidelity images that show not only textures but also flaws and defects that were previously undetectable. Glare is also reduced for more comfortable observation.

Halation removal via HDR (Sample: a printed circuit board (PCB))

Texture enhancement via HDR (Sample: a printed circuit board (PCB))

## See More in One Image

The camera's wide field of view (FN 26.5) enables you to quickly observe a large area, making your inspections faster and more efficient.

The DP75 camera's field of view when used with the 0.63× camera adapter (red frame) compared to the DP74 (predecessor) camera's field of view when used with the 0.63× camera adapter (blue frame)

## Easy Fluorescence to Infrared Imaging using the Same Microscope Camera

Engineered to excel in various applications, the DP75 camera integrates numerous benefits with a high-sensitivity cooled CMOS sensor and a switchable infrared (IR) cut filter. Benefits include:

- › Covers a wide range of wavelengths: the DP75 supports wavelengths from the visible light up to 1000 nm, enabling you to capture exceptional quality brightfield, darkfield, MIX (brightfield+darkfield), polarization, DIC, fluorescence, and NIR\* observation images.
- › Clear fluorescence images with minimal noise: capture high-quality images even if the fluorescence is weak, which is helpful in applications such as examining resist residues.

\*A microscope system for NIR observation is required

A MIX (fluorescence+darkfield) observation image of a photoresist residue on a semiconductor wafer

A polarized observation image of a part of mineral

A brightfield observation image of a flexible board.

A NIR observation image of a flexible board.

# Powerful Cameras for Everyday Microscopy Applications

## DP28 and DP23 Digital Microscope Cameras

### Reliable Data from Images You Can Trust

The DP28 and DP23 cameras share a suite of smart features and precise color accuracy that make your microscopy imaging easier. The DP28 camera offers up to 4K resolution across a wide field of view to provide high-resolution images of your inspection samples that are free from artifacts. If resolution isn't your focus, the DP23 camera balances advanced functions to perform almost any imaging application.

## Efficient Inspections with Clear, Distortion-Free Images DP28

### High-Quality and High-Resolution 4K Images

View your samples in stunning 4K resolution to see even the finest details under low magnification.

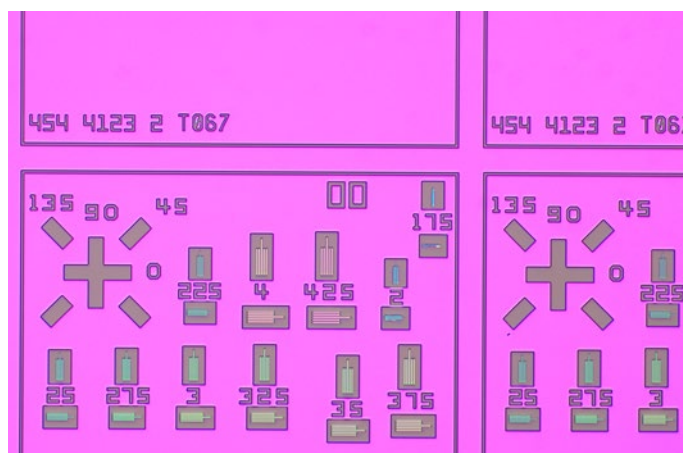

### Comfortably View Images on Screen DP28

Whether you're showing your samples on a monitor or a projector, the images on the screen look exactly as they appear through the microscope's eyepieces, so you know you're not missing details or data. The DP28 camera's 8.9-megapixel CMOS sensor and global shutter capture full-HD-quality images at 60 fps, so your samples render clearly. If you move your sample or the microscope stage, the image is displayed with no wobbling or tearing artifacts, so you can scan samples even faster.

## The Right Balance of Resolution and Speed DP23

The 6.4-megapixel DP23 camera can capture full-HD-quality images at up to 60 frames per second (fps), so you can obtain images with the level of detail you need quickly and efficiently.

## Accurate Color Reproduction Improves Inspection Quality

### DP23 DP28

The DP28 and DP23 cameras provide reliable color accuracy. Dedicated ICC profiles show your samples in their natural colors to more easily spot defects.

# Easy to Use with Minimal Training

## High Frame Rate for Smooth Navigation in Low Light

DP23

DP28

The Fast Live function provides a consistently high frame rate during long-exposure imaging, so your image remains smooth when scanning samples, even under low light conditions.

## Confirm that Your Measurement Area Is in Focus

DP23

DP28

Make sure that your measurement area is properly focused using the Focus Peaking function.\* The software shows a map of the sample with the in-focus areas in color and the out-of-focus areas in grayscale.

Focused on the lower layer

Focused on the upper layer

## Find Defects Fast

DP23

With a field of view up to FN25, you can spot defects faster since you can see more of your sample at a glance. This means you spend less time scanning around the sample during the inspection and more time evaluating what you're seeing on the screen. Avoid the time-consuming process of stitching multiple smaller images together, so you can be more productive and efficient.

The DP23 camera's field of view when used with the 0.35× camera adapter (red frame) compared to the conventional camera's field of view when used with the 0.35× camera adapter (dotted frame)

\*Available in PRECIV software.

# Efficient Workflow

## Easily Share Images Outside Restricted/High-Security Areas

DP23

DP28

All your critical data—images, annotations, and analytics—can be displayed and shared together locally or remotely using the camera's AOU software with network controller. This provides a much simpler solution than relying on email attachments to discuss images and results with colleagues. And thanks to support for network security protocols such as NIST and GDPR along with antivirus support, you can share your data safely.\*

For complex or advanced image analysis, both cameras are compatible with OLYMPUS Stream software to further streamline your workflow.

## Capture Clear Images from Dim Samples

DP23

DP28

When making observations using polarization, the High Contrast mode enables easier image acquisition with a high signal-to-noise ratio so that you can capture high-quality images from dim samples.

Without contrast mode vs with contrast mode

## Save Valuable Work Space

DP23

DP28

You can attach the camera's stand-alone module to the back of a monitor using a VESA adaptor to keep it off the desk and out of the way.

\*Antivirus software is optional.

# See Fine Details Under Low Magnification

## SC180 Digital Microscope Camera

### Capture More Detail

If you prefer a camera with high resolution and 4K capabilities but don't need the highest levels of field of view, frame rate, and signal-to-noise ratio, consider the SC180 digital camera.

With almost four times more pixels than a standard microscope camera, the 18-megapixel SC180 camera's high resolution enables you to capture images with a high level of detail, so you can zoom in to view fine structures using low-power objectives.

### Advanced Image Tools

The camera supports the advanced imaging tools found in DP series cameras, including:

- › Olympus Smart Image Averaging
- › Automatic white balance
- › Focus peaking
- › Fast Live

### Good Color Reproduction

Integrated shading correction and a sharpness filter help you view color details and subtle variations in your samples.

### Affordable 4K Live Images

4K live images enable you to engage colleagues by showing detailed images on a screen or monitor. When showing a live image, you can pan across the sample and zoom in to view fine details.

## Microscope Digital Camera Line up

	DP75	DP28	DP23

# Specifications

## DP75 Specifications

Camera type		Single-chip color camera (pixel shifting) Cooling system: Peltier device (active cooling)
Imaging sensor size		1.1-inch, 12.37-megapixel color CMOS image sensor, global shutter
Camera mount		C-mount
Effective image resolution		8192 × 6000 (pixel shifting), 4096 × 3000 (3CMOS mode), 4096 × 3000 (1 × 1), 2048 × 1500 (2 × 2), 1920 × 1080 (1 × 1), ROI
Sensitivity		1x/2x/4x/8x/16x/32x (ISO 100/200/400/800/1600/3200 equivalent)
A/D		12-bit
Metering modes	Mode	Auto / SFL-Auto / Manual
	Adjustment	±2.0 EV step: 1/3 EV
	Time	28 μs–120 s
Binning		2 × 2
White balance		Manual/Area designation
Black balance		Manual/Area designation
Live frame rate *1		4096 × 3000 (1 × 1): 22 fps, 2048 × 1500 (2 × 2): 22 fps, 1920 × 1080 (1 × 1): 60 fps
Still image transfer time		8192 × 6000 (pixel shifting): approx. 3 s, 4096 × 3000 (3CMOS Mode): approx. 2 s, 4096 × 3000 (1 × 1): approx. 1.2 s, 2048 × 1500 (2 × 2): approx. 1.0 s, 1920 × 1080 (1 × 1): approx. 0.4 s
Monochrome mode		Available (Standard/Custom )
Color space		sRGB, AdobeRGB*2
IR cut filter		Switchable: In: 400 nm up to 650 nm Out: 400 nm up to 1000 nm
Manual panoramic imaging (instant MIA)*3		Available
Position navigator*3*4		Available
Control software		PRECiV v. 2.1 or later DP2-TWAIN v. 10.4 or later
External trigger		Available (input/output)
Dimensions (W × D × H)	Camera interface cable	Approx. 2.7 m (8.9 ft)
	AC adapter	107 × 47 × 30 mm (4.2 × 1.9 × 1.2 in.)/Approx 0.3 kg (0.7 lb)

\*1 Frame rate may decrease depending on the condition of your PC, monitor resolution, and/or software.

\*2 Monitor designed to meet Adobe RGB is required.

\*3 Not available in the combination of DP2-TWAIN.

\*4 Not available in the combination of PRECiV Capture.
